SKILLS

Programming Languages: Java, Python, C

Web Technologies: HTML, CSS, React.js

Databases: MySQL, DBMS fundamentals

AI-Assisted Development: Cursor (intermediate level), AI-based code generation workflows

Tools & Platforms: Git, AWS (API Gateway, Lambda, Cognito, CloudWatch), VS Code, JIRA

Core CS Concepts: Data Structures & Algorithms, OOP, Operating Systems

AI/ML: Fundamentals of Machine Learning, Prompt-based systems

EDUCATION

Bachelor of Engineering (CSE) - Manipal Institute of Technology

- Final Year (Completed 7th semester)
- CGPA: 7.85

Intermediate Public Examination- FIITJEE

- 100% PCM in 12th – overall 98%
- Overall, XI and XII - 94.1%

CBSE Secondary School Examination – Meridian School

- Class X 94%

CERTIFICATION

- Python for Data Science, AI & Development - IBM
- Applied cryptography specialization - University of Colorado System

Computer Science Engineer with strong foundation in Data Structures, Algorithms, and full-stack development. Experienced in delivering production-grade features and leveraging AI-assisted development tools such as Cursor. Eager to contribute to impactful software development and explore emerging technologies

EXPERIENCE

Jul 2025 – Present **|Pictory | Software Engineering Intern**

- Led end-to-end implementation of enterprise onboarding workflows, redesigning authentication and survey flows to improve user activation.
- Leveraged Cursor AI for accelerated code generation, refactoring, and debugging, reducing development turnaround time significantly.
- Implemented invite auto-acceptance and dynamic user routing (admin vs team invitee) improving onboarding efficiency.
- Designed contextual prompt generation system based on user inputs.
- Built secure serverless proxy using AWS API Gateway + Lambda, integrated Cognito (Google SSO), and enabled monitoring via CloudWatch.
- Collaborated with Product, Design, and QA teams; presented HLDs, effort estimates, and drove E2E testing and issue resolution.

PROJECTS

Healix – A Healthcare Chatbot

- Designed and implemented a fully functional healthcare chatbot as part of a comprehensive project. Utilized Flask, Python, YAML, and React.js to create an interactive user interface and backend.
- Integrated user authentication, chat history management, and a symptom-based query system for personalized responses.
- Implemented APIs and a structured database for seamless data handling and dynamic response generation.

Music Player Website

- Developed a Music Player Website as part of a Database Systems (DBS) project.
- Developed a fully functional music player like Spotify using PHP, React.js, Online SQL, HTML, and CSS
- Integrated various APIs and Online SQL for enhanced functionality and data management

AI DEVELOPMENT EXPERIENCE

- Actively using Cursor AI for the past 7–8 months during internship.
- Experienced in prompt-driven code generation, debugging, and rapid feature scaffolding.
- Improved development velocity by combining manual engineering with AI-assisted workflows.
- Comfortable validating, refactoring, and production-hardening AI-generated code.
